WHY ULTIMATE HEATERS ARE THE BEST ON THE MARKET

Only Ultimate Products offers heaters made with stainless steel radiant tubes, stainless steel reflectors, stainless steel burner cabinets and stainless steel fan housings. This makes them perfect for vehicle wash bays where moisture and air turbulence attack the heater. No other heater offers longer life with no corrosion.

Ultimate Products heaters are available in lengths of 12 to 60 feet, with Btu outputs ranging from 40,000 to 150,000. Ultimate Products' U-Tube designs deliver uniform heat distribution along the entire length of the heater. Straight Tube (S-tube) designs taper heat for maximum efficiency. S-tubes can be turned with up to two 90-degree bends to zigzag through tight areas. All are easy to install and service. Modular parts detach for routine maintenance.

Electronic controls and valves are completely enclosed and sealed from moisture in the

atmosphere. No other manufacturer offers this important design feature. All Ultimate Products burner cabinets are made of 100% stainless steel. Heaters can be fitted to bring in outside air for combustion, for a completely closed system, improving combustion efficiency and extending the life of the heater.

Ultimate Products is the only company to design a heater exclusively for the CAR WASH INDUSTRY. Only Ultimate Products can provide you with a "car wash heater."

SAVE UP TO 75% OR MORE WITH ULTIMATE PRODUCTS' HEATERS

CONVENTIONAL WARM AIR

- The difference in temperature between roof and floor is 40 degrees.
- A significant portion of heat is escaping through the roof and out the doors.
- To maintain 35-degree ice protection at the floor, each warm-air heater must heat air to 180 degrees — wasted energy when doors are open.
- Additional energy is wasted to run air-circulation fans to move heat.

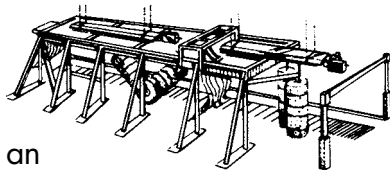

ULTIMATE PRODUCTS HEAT

- Puts heat where it's needed with almost no waste.
- Temperature difference between roof and floor is only 2 to 3 degrees.
- Minimal heat loss through the roof and doorways.
- Ice-protection is maintained in the same way the sun provides heat. Infrared rays are directed onto floors, walls and equipment, warming all to precise ice-prevention levels.
- No air-circulation fans are necessary.

WHERE TO USE ULTIMATE PRODUCTS HEATERS IN THE CAR WASH

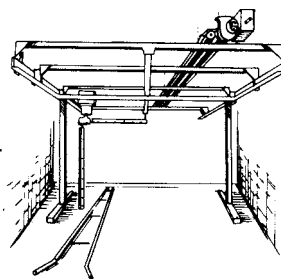

Tunnel Drive Systems:

Ultimate Products heaters are the perfect choice. One SGX38S40 will heat over 40 feet of an average tunnel. Heaters can be suspended directly overhead or along side walls for complete equipment, wall and floor heat. Heaters can be mounted outside for exposed conveyor heat or prep-personnel comfort. In equipment rooms, waiting areas, and detailing areas, ER- and SC-series heaters offer lowest-cost solutions to your heating problems.

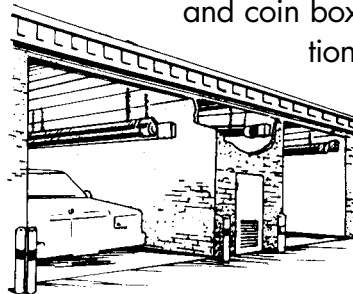

Frictionless/Automatics:

Ultimate Products delivers low-cost frost protection. One to two heaters will eliminate the need for under floor heating, drip systems, rail antifreeze systems, and will keep ice off the walls and doors.

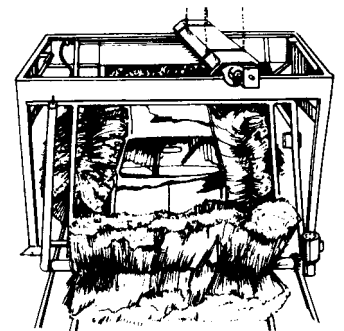

Self Service/Hand-Wash Bays:

Ultimate Products heaters can be less expensive than under floor heating. Mounted on a side wall, our heater will also keep equipment, walls and coin boxes ice-free. An additional benefit is that your bay is also warmed, encouraging customers to stay longer and spend more money.

Roll-Over Brush Bays:

Ultimate Products heaters keep ice from forming on brushes, spray arches, floors and walls.

- **Minimize down time** and help improve equipment operation.
- **Keep you open** when your competitors are closed.
- **Improve customer comfort** in waiting areas.
- **Lower maintenance cost** of your chain drive and frictionless systems. Our heaters will keep your drive

trains, guide rails, brushes and water lines frost free.

- **Deliver fast return on your investment**, by saving up to 70% in fuel costs, with lower maintenance and more operating time.

WHAT PEOPLE ARE SAYING ABOUT ULTIMATE PRODUCTS HEATERS

Remote, Self Serve on LP

"I have friends in the business who pay more for fuel in a month than we paid for our Ultimate Products heater. Very low fuel bills... even on LP (Propane)."

Rod Hays of R&D Inc., Gravois, MO

Tunnel

"These heaters are great! These heaters kept the entrance and exit of my tunnel from freezing! Very low maintenance and works great! Better than any other heater I have had in the past!"

Ed Luy of Sparkle Car Wash, Freeport IL

Tunnel

"Good for zone heating... we use a U-tube over a cloth curtain and it works great."

Walt Lacey of Southern Classic Auto Wash, Blacksburg, VA

Outdoor Apron

"Works great... before, ice would cover the approach area to the wash."

Roy Price of Shell Car Wash, Anderson, IN

Self-installed Automatic

"Easily installed our custom designed heater ourselves without any outside help."

Ray Schmidt of Towne Car Wash, Waterloo, IL

Tunnel

"Durable, easy to install... Great on fuel."

Phil Frank of Westchester Square Car Wash & Height Car Wash, Hasbrouck, NJ

Tunnel

"Ultimate Products Stainless Steel Infrared Heaters have performed great in my wash [an all cloth tunnel wash], and helped to keep me in operation."

Frank Gambino of Royal Car Wash, Hamden, CT
